EXPERIENCE

Castco Testing Centre Limited

Sep 2023 – Present

AI Programmer

- Automated customer service phone interactions with a real-time AI agent, enabling dynamic conversations and efficient call routing
- Researched effective object tracking tools for local construction equipment in practical environments, hosting the server on AWS EC2
- Developed PyQt tool to enhance document handling efficiency by 50% using Google Cloud Platform
- Collaborated in a team of six to develop item detection software capable of detecting and matching 50 items in under 3 seconds

PONS.ai

May 2022 – Aug 2022

AI Engineer Intern

- Conducted research on state-of-the-art generative AI models and techniques for image style transfer
- Optimized the AI pipeline by incorporating traditional algorithms and neural networks, resulting in a 2/3 reduction in inference time
- Contributed to the complete development cycle, including data collection, image preprocessing, and experimentation with StyleGAN

EDUCATION

The University of Hong Kong

Sep 2019 – Aug 2023

Bachelor of Arts and Science (Applied AI)

CGPA 3.38

- Studied advanced topics in mathematical foundations, machine learning architectures and research methodologies
- Relevant coursework includes Applied Deep Learning, Image Processing and Computer Vision, and Natural Language Processing
- Awarded bronze medal in the EEG & AI competition hosted by the Faculty of Education

PROJECTS

Context-aware LLM translation | *Javascript, React, Electron, Ollama*

Nov 2024 – Present

- Developed a desktop translation application utilizing a local LLM, built with React and Electron
- Researched large language models to optimize translation accuracy, incorporating self-reflective capabilities for linguistic flaws
- Enabled the translation agent to understand context and learn from examples
- Employed textual embeddings for automatic quality estimation

Improving training algorithms | *Research, Python, Pytorch*

Sep 2022 – May 2023

- Investigated novel optimization strategies to enhance the generalization ability of Adam-like optimizers
- Conducted extensive reviews of the latest improvements and their theoretical foundations in computer vision, which inspired our original improvements
- Carried out more than 100 experiments on various CNN architectures and optimizers to demonstrate the faster convergence and improved generalization ability of our optimizer

TECHNICAL SKILLS

Languages: Python, Javascript

Frameworks: Pytorch, React, Electron

Developer Tools: Git, Amazon Web Services, LangChain, Twilio
